

MARKETING PLAN

Flowsy

A launch and growth plan for Instagram, YouTube, and WhatsApp — built around Flowsy's actual features: habits, tasks, journal, finance, mindfulness, fitness, and the new GPS-tracked Activity Tracker.

Prepared August 2026

1. POSITIONING

The one app that replaces five

Flowsy's core pitch isn't "another habit tracker" — it's that most people run five separate apps to manage their life (a habit tracker, a to-do list, a journal, a budgeting app, a fitness tracker) and none of them talk to each other. Flowsy is one app, one login, one streak system, covering all of it.

One-line positioning: "Your habits, tasks, journal, money, and fitness — in one app, not five."

Who it's for

SEGMENT	WHY FLOWSY FITS
Productivity/self-improvement audience (18–34)	Already using 2–3 separate tracker apps; wants consolidation, not another single-purpose tool.
Budget-conscious young adults	Finance tracker (accounts, budgets, debts, goals) bundled with habit-building, not sold as a separate paid app.
Fitness beginners	New Activity Tracker (GPS running/walking/hiking, levels) is a lighter, gamified alternative to Strava for people who aren't "runners" yet.
Couples / accountability partners	The Partner feature (shared streaks, cycle insights, 1:1 chat) is a genuinely differentiated hook — few competitors have this.

What to actually show, not just say

- **Consolidation:** screen-recording a single day — check off a habit, log a task, write a mood check-in, log an expense, log a run — all inside one app, one login.
- **Levels & streaks:** the Activity Tracker's level-up system (Beginner → Legend) and habit streak badges are inherently shareable "I hit Level 3" moments.
- **Partner feature:** two people syncing streaks and chatting inside the app — a relationship/friendship angle most competitors don't have.
- **Themes:** the 5 visual themes (including the neon "Cyber Sanctuary" look) are a cheap, effective aesthetic hook for short-form video thumbnails.

2. Instagram

Instagram is the discovery + retargeting engine — Reels for reach, Stories for retention with existing followers, feed posts for credibility/proof.

CONTENT PILLARS

PILLAR	FORMAT	EXAMPLE
"Day in my Flowsy" screen recordings	Reel, 15–30s	Fast cuts: check off habit → log expense → write journal → start a GPS run, set to trending audio.
Level-up / streak flexing	Reel or Story	Screen recording of the level badge animating from Level 1 → Level 2 after a logged run.
Before/after theme reveal	Carousel or Reel	Swiping through all 5 themes on the Settings screen — satisfying, low-effort, high-completion-rate content.
"POV: you and your partner"	Reel, relationship-adjacent	Split-screen of two phones both getting a habit-streak notification from the Partner feature.
Relatable pain-point hooks	Reel, text-on-screen	"I had 5 apps for this" → screen wipe → "now I have one" (Flowsy dashboard).
Feature explainer carousels	Carousel, feed	One feature per slide (Habits, Tasks, Journal, Finance, Activity Tracker, Partner) with a single screenshot each.

CADENCE

- **Reels:** 3–4 per week (this is the growth lever — prioritize this over feed posts).
- **Stories:** daily — polls ("which theme is your favorite?"), countdowns, behind-the-scenes of new features shipping.
- **Feed/carousel:** 1–2 per week, more evergreen/explainer content.

HASHTAG & CAPTION APPROACH

Mix broad discovery tags with niche community tags — don't rely on hashtags alone, but they help early on with zero followers.

[#habittracker](#) [#productivityapp](#) [#selfimprovement](#) [#budgetingapp](#) [#runningapp](#)
[#accountabilitypartner](#) [#appoftheday](#)

Caption formula: hook line (question or bold claim) → 1–2 lines on the specific feature shown → soft CTA ("link in bio" / "comment 'FLOW' and I'll send you the link").

BIO & LINK SETUP

- Bio: "One app for habits, tasks, money & fitness. 5 themes. Free to start." + link-in-bio tool pointing to the Play Store listing.
- Highlight covers: "Features," "Themes," "Reviews/Testimonials," "FAQ."

3. YouTube

YouTube plays a different role than Instagram: less about viral reach, more about capturing high-intent search traffic ("best habit tracker app 2026", "habit tracker with budget", etc.) and building trust through longer-form proof.

TWO CONTENT TRACKS

Shorts (repurposed from Reels)

Reuse the same Instagram Reels vertically, same cadence (3–4/week). Shorts is a discovery engine, not a place for unique content — don't create twice.

Long-form (1x per 1–2 weeks)

5–10 minute videos targeting search intent: full app walkthroughs, "how I use Flowsy to track everything," comparison videos.

LONG-FORM VIDEO IDEAS (SEARCH-INTENT DRIVEN)

TITLE IDEA	WHY IT RANKS/CONVERTS
"I tried tracking my whole life in ONE app for 30 days"	Personal-experiment format, strong retention, natural feature tour.
"Flowsy app review & full walkthrough (Habits, Finance, Fitness)"	Captures "[app name] review" search intent directly.
"Best free habit tracker apps 2026 (and why I switched)"	Comparison-style video ranks for high-volume generic searches, positions Flowsy as the winner.
"How I track my runs without Strava (GPS activity tracker)"	Targets fitness-app searchers specifically for the new Activity Tracker feature.
"Accountability partner app — track habits with your partner"	Targets the couples/friends accountability niche with almost no incumbent competition.

FORMAT NOTES

- Always show your face for at least the intro 15 seconds — pure screen recording videos underperform on watch time versus a presenter-led hook.
- Thumbnail: face + bold 3–5 word text overlay + one theme's neon color for pattern recognition across videos.
- End every video with a specific CTA: "link in description, and comment your current streak."
- Pin a comment with the Play Store link on every video.

4. WhatsApp

WhatsApp isn't a discovery channel — it's a conversion and retention channel, best used for warm audiences (existing followers, beta testers, friends-of-friends) rather than cold reach.

THREE WHATSAPP PLAYS

1. WhatsApp Status

Post the same Reels/Shorts content as Status updates. Near-zero extra effort, reaches your existing contacts daily. Best for: personal network, early testers, local community groups you're already in.

2. Broadcast list for early users

Build a broadcast list (not a group — feels less spammy) of anyone who downloads the app early or asks about it. Send at most 1–2 messages per week: a new feature ship, a milestone ("100 users hit Level 5 on the Activity Tracker!"), or a direct ask for a Play Store review.

3. Accountability-partner seeding

This is Flowsy's most WhatsApp-native feature. Directly pitch pairs of friends/couples: "pair up with your partner in Flowsy and share streaks — here's a 30-second demo," sent as a short video directly in a 1:1 chat, not a broadcast. This converts far better than any ad because the Partner feature literally requires two people, and WhatsApp is where those pairs already coordinate.

MESSAGE TEMPLATES

Early access invite:

"Hey — I've been building an app called Flowsy (habits + tasks + journal + budget + fitness, all in one). Just added GPS run tracking with levels. Want the early link? Would genuinely love your feedback."

Partner-feature pitch:

"Random idea — Flowsy (the app I've been using) has an accountability-partner feature where we could see each other's habit streaks and get a private chat inside the app. Want to try pairing up for a week?"

5. Weekly content calendar (steady-state)

DAY	INSTAGRAM	YOUTUBE	WHATSAPP
Mon	Reel (pillar content)	—	Status repost of Reel
Tue	Story poll/BTS	Short (repost)	—
Wed	Reel (pillar content)	—	—
Thu	Feed carousel	Short (repost)	Broadcast (weekly, once every 1–2 wks)
Fri	Reel (pillar content)	Long-form (biweekly)	Status repost of Reel
Sat	Story (UGC/testimonial)	Short (repost)	—
Sun	Story (recap/streak flex)	—	Status

6. LAUNCH PHASING

PHASE	FOCUS	DURATION
Seed	Personal network via WhatsApp Status + direct messages; get first 20–50 real users and their feedback/testimonials.	Weeks 1–2
Content ramp	Start the Instagram Reels cadence (3–4/wk) using real testimonials and feature demos gathered in Seed phase.	Weeks 3–6
Search capture	Begin biweekly long-form YouTube videos once there's enough app polish/testimonials to sustain a 5–10 min video.	Week 6+
Partner-feature push	Dedicated WhatsApp campaign pitching the accountability-partner feature to pairs of friends/couples — this is the most defensible, least-copyable growth lever.	Ongoing from week 4

7. METRICS TO TRACK

- **Instagram:** Reels reach, saves (a stronger signal than likes for this kind of utility content), follower growth rate, link-in-bio click-through rate.
- **YouTube:** average view duration on long-form (aim for >50%), Shorts swipe-through rate, search impressions (YouTube Studio → Traffic source: search).
- **WhatsApp:** broadcast list size, install attribution via a simple "how did you hear about us?" prompt at signup or a dedicated referral note.
- **Cross-channel:** Play Store listing page views vs. installs (conversion rate), Day-7 retention of installs from each channel if attribution is set up.

8. BUDGET & TOOLS

This plan is designed to run on \$0–50/month for an indie launch:

- **Editing:** CapCut (free) for Reels/Shorts.

- **Scheduling:** Meta Business Suite (free) for Instagram; native YouTube scheduling.
- **Link-in-bio:** a free tier tool (Linktree/Beacons) or a single static page.
- **Paid boost (optional, later):** once organic Reels show which hook performs best, put \$5–10/day behind the top 1–2 performing Reels as ads rather than guessing blind.

9. Account setup guide

One-time setup checklists so both accounts are configured correctly before the first post goes out.

INSTAGRAM

STEP	WHAT TO DO
Account type	Switch to a Professional (Business) account under Settings → Account type — this unlocks Insights, a contact button, and category label. Choose category "App page" or "Software company."
Username	Use one consistent handle everywhere — @flowsy.app or @useflowsy (check availability on Instagram, YouTube, and WhatsApp Business at the same time so they match).
Profile photo	App icon, exported at 320×320px minimum, centered with padding (Instagram crops to a circle).
Name field	"Flowsy — Habits, Tasks & Finance" (this field is searchable, unlike the username).
Bio	"One app for habits, tasks, journal, money & fitness 🌈 5 themes · free to start" + emoji line breaks for scannability.
Link	Add the link-in-bio tool URL (see Budget & tools) pointing to the Play Store listing.
Contact button	Add a business email so the "Contact" button on your profile works (Settings → Business → Contact options).
Highlights	Create empty "Features," "Themes," "Reviews," and "FAQ" highlight covers ahead of time so Stories have somewhere to land as they're posted.
Insights check	Confirm Insights is active (Professional Dashboard) before the first Reel goes out, so day-one performance data isn't lost.

YOUTUBE

STEP	WHAT TO DO
Channel account	Create the channel under a dedicated Brand Account (YouTube Studio → create a Brand Account), not a personal Google account — this lets you add other managers later without sharing personal login.
Handle	Match the Instagram handle: @flowsy.app or @useflowsy.
Channel icon	Same app-icon image used on Instagram, 800×800px.
Banner art	2560×1440px canvas (safe area 1546×423px) — keep the app name and a one-line value prop inside the safe area only.
Channel description	Front-load searchable keywords in the first two lines: "Flowsy is a habit tracker, task manager, budget app, and fitness tracker with GPS activity tracking — all in one app."
Channel keywords	Studio → Settings → Channel → Basic info → Keywords: add "habit tracker," "budget app," "fitness tracker," "accountability partner app," "productivity app."

Channel trailer	Set the strongest 60–90s "day in my Flowsy" video as the trailer shown to non-subscribers (Customization → Layout).
Verification	Verify the channel with a phone number (Studio → Settings) early — this removes the 15-minute upload length cap and unlocks custom thumbnails from day one.
Playlists	Create playlists matching the content pillars up front: "App Walkthroughs," "Habit & Productivity Tips," "Finance Features," "Activity Tracker / Fitness."
End screen/cards	Add an end screen linking to the Play Store on the very first upload, then reuse the same template for every video after.

10. Contact

For product questions, partnership inquiries, press, or support related to anything in this plan:

Email: data24zone@gmail.com

App: Flowsy — available on Google Play

Response time: allow up to 2 business days for support and product questions.

Use this same address consistently as the Instagram "Contact" button destination and the email listed in the YouTube channel's "About" page, so it's the one place all channels funnel inbound questions to.
