

One app, five life scores, a 14-day trial worth talking about.

Flowsy tracks Productivity, Fitness, Finance, and Mindfulness under one *Holistic Pulse* score — that "one number for your whole life" hook is the campaign's center of gravity. This playbook covers the launch timeline, the full channel mix, and a dedicated influencer program, sized for a bootstrapped India-first launch rather than a paid-media budget you don't have yet.

₹149–₹999

monthly → yearly Pro

KPIs

01 · SEQUENCE

Three phases, not one launch day

A single "launch day" wastes the trial's own virality window. Pre-launch builds the waitlist and first creator relationships; launch week concentrates the push while the App Store's "new" boost is live; growth is where referral and lifecycle marketing actually compound.

WEEKS -4 TO -1

Pre-launch

- 1 **Waitlist landing page** — collect emails against "be first to try the Holistic Pulse score," gated by referral position (invite 3 friends, move up the list).
- 2 **Seed 8–10 nano/micro creators** (see Influencer program) with early builds — 2 weeks of real usage before any post goes up, so content shows a real streak, not a demo.
- 3 **ASO groundwork** — App Store/Play listing copy, screenshots, and a short preview video optimized around "habit tracker," "life score," and "all-in-one wellness app" search terms.
- 4 **Founder-voice content** — 3–4 build-in-public posts (LinkedIn/X/Threads) on why a Life Score, not five separate apps.

LAUNCH WEEK

Concentrated push

- 1 **Coordinated creator drop** — every seeded creator posts within the same 48 hours, each covering a different module (one on cardio+route sharing, one on Finance budgets, one on the Family plan).
- 2 **Product Hunt / community launch** — Reddit r/productivity, r/GetDisciplined, Indian Product Hunt-style communities, relevant WhatsApp/Telegram habit-tracking groups.
- 3 **Trial-first CTA everywhere** — every piece of content ends on "14 days, everything unlocked" rather than a feature list — matches the trial-not-freemium positioning.
- 4 **Small paid boost** — a modest Meta/Instagram spend behind the single best-performing organic creator post, not a fresh ad from scratch (cheaper CPM, borrowed trust).

ONGOING

Growth loop

- 1 **Referral via Family Plan** — the invite-by-username flow is already a growth loop: an invited member experiences Pro firsthand, which is the strongest possible upgrade path once they want their own data.
- 2 **Always-on affiliate program** — evergreen creator partnerships with tracked promo codes, paid on conversion not just reach (see Compensation models below).
- 3 **Lifecycle push/email** — the new trial-ending reminders (3-day / 1-day / expired) are launch infrastructure now, not an afterthought — treat their copy as marketing surface, A/B test it.
- 4 **Seasonal hooks** — New Year resolutions (Jan), Navratri/fitness season, exam-season study-habit push (students, via Tasks/Productivity), financial-year-end (Finance module, Mar).

Every channel, sized to what it's actually good for

Not "which channel is best" — which job each one does. Organic and influencer carry trust and demonstration; paid carries reach on top of an already-proven creative; lifecycle and referral carry retention and expansion.

ORGANIC

Reels / Shorts

Per-module demo content — GPS route-to-Feed share, Life Score reveal, Family plan setup. Already scripted in the Reel/Short Content spreadsheet from this session.

Cost: time only

HYBRID

Influencer seeding

Nano/micro creators in fitness, personal-finance, and productivity/study niches — full program below.

Cost: ₹0–15K per creator or Pro access

ORGANIC

ASO

Store listing, screenshots, keywords — the highest-leverage free channel for an app people are already searching for ("habit tracker," "all in one wellness app").

Cost: one-time setup

ORGANIC

Community

Reddit, Indian Telegram/WhatsApp habit-and-fitness groups, Discord study servers — go where the behavior already happens rather than building a Flowsy-branded community from zero.

Cost: time only

PAID

Meta / Instagram ads

Retarget site/waitlist visitors and lookalikes off the best organic creative — never a cold ad with no proof point yet.

Cost: ₹500–1,500 CPI typical for India lifestyle apps

PAID

Google UAC

Keyword intent capture on "habit tracker app," "budget tracker India," "workout log app" — high-intent, worth testing small before scaling.

Cost: usage-based, test at ₹5–10K/month first

HYBRID

Referral / Family Plan

The invite-by-username flow already built is a real viral loop, not a bolted-on "refer a friend" banner — lean into it in every piece of content about the Family plan.

ORGANIC

Lifecycle push/email

Trial-ending reminders, streak-at-risk nudges, weekly Life Score recap — retention marketing that's already partly built into the notification system.

Cost: revenue share, self-funding

Cost: time only

03 · DEEP DIVE

Influencer marketing program

Match the creator's existing niche to a specific Flowsy module rather than briefing "post about the whole app" — a fitness creator covers cardio/route-sharing and streaks; a personal-finance creator covers budgets; a student/productivity creator covers Tasks and the Life Score.

Tier	Followers	Role in the plan	Typical compensation	Deliverable
Nano	1K–15K	Highest trust-per-rupee — early seeding, authentic day-in-the-life usage.	Free 1yr Pro + ₹1–3K	1 Reel + 3 Stories over 2 weeks
Micro	15K–100K	Core of the launch-week creator drop — enough reach to matter, still affordable at scale.	₹3K–15K flat + affiliate code	1–2 Reels, a pinned promo-code Story
Mid	100K–500K	Selective — 2–3 max at launch, one per priority niche (fitness / finance / productivity).	₹15K–60K flat + affiliate	1 dedicated video/Reel + swipe-up/link
Macro	500K+	Post-traction only — wait until organic + micro proof points exist, so a macro deal buys credibility on top of real numbers, not a cold pitch.	Negotiated, revenue-share preferred	Campaign-level partnership

FITNESS

Cardio/GPS creators

Runners, cyclists, walkers who'd genuinely use route tracking + the new Map/GIF Feed share — content writes itself off their existing routine.

FINANCE

Personal-finance creators

India's #FinTwit/finance-Instagram niche is large and budget-app-hungry — lead with the budget-adherence score, not just "track expenses."

PRODUCTIVITY

Study/productivity creators

MINDFULNESS

Wellness/journaling creators

Student and "study with me" creators — Tasks + habit chains + streaks map directly onto their existing content format.

Journaling and meditation-app reviewers — the relationship check-in feature (mode + duration + reminders) is a genuinely novel angle few competitors have.

Sample outreach brief (copy/adapt per creator)

SUBJECT	Partnering with [Creator] on Flowsy — a life-score app, not another habit tracker
HOOK	" Flowsy scores five parts of your life — Fitness, Finance, Productivity, Mindfulness, Relationships — into one number, the way a credit score works for everything else."
ASK	Use it for real for 2 weeks before posting. One Reel showing your actual [cardio route / budget / streak], ending on the 14-day free trial.
OFFER	Free 1-year Pro (₹999 value) + a personal promo code that gives their audience an extra 7 trial days, tracked for a rev-share bonus on conversions.
NON-NEGOTIABLE	Must disclose as a paid/gifted partnership per ASCI guidelines (India) — build this into every brief, not an afterthought.

Why gifted-Pro-plus-small-fee beats pure flat-fee at this stage: a creator who's actually building a streak posts more authentically and for longer than one paid to do a single scripted read — and it costs less than most flat-fee asks for the same tier.

04 • ALLOCATION

Suggested first-quarter split

Weighted toward organic and creator seeding, since [the unit-economics model](#) from this session's earlier work already established that conversion rate — not ad spend — is the biggest lever, and there's no install base yet to retarget anyway.

Influencer seeding (nano/micro)		40%
Paid social (Meta/Instagram)		25%
Google UAC (search intent)		15%
Content production (video/design)		12%

05 · MEASURE

What each channel is actually accountable for

The new `paywallEvents` logging (this session) and existing purchase-verification data are the real sources of truth here — not vanity metrics like raw reach.

INFLUENCER Promo-code conversions Cost per trial-start	ASO Store listing → install rate Organic install share
PAID SOCIAL Cost per trial-start vs. organic baseline	REFERRAL Family invites accepted K-factor per subscriber
LIFECYCLE PUSH Trial → paid uplift vs. no-reminder control	ALL CHANNELS Trial → Pro conversion % The one number that matters most
PAYWALL GATES Hits per feature Which gate to loosen/tighten	COMMUNITY Referral-traffic signups Per platform (Reddit/Telegram/...)

Companion execution detail: this session's three spreadsheets — Marketing Strategy, Reel/Short-form Content per feature, and Help-Video scripts — are the tactical layer under this playbook. Real product facts referenced above (pricing, trial length, Family plan cap, module list) come straight from the codebase, not assumptions.
